FIGURE BRICK DER SCHNITTANSICHT

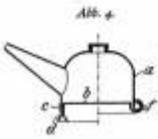

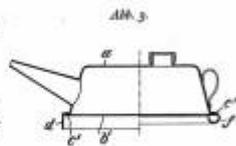

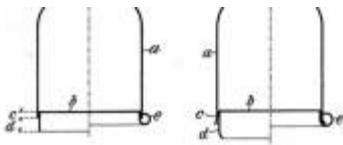

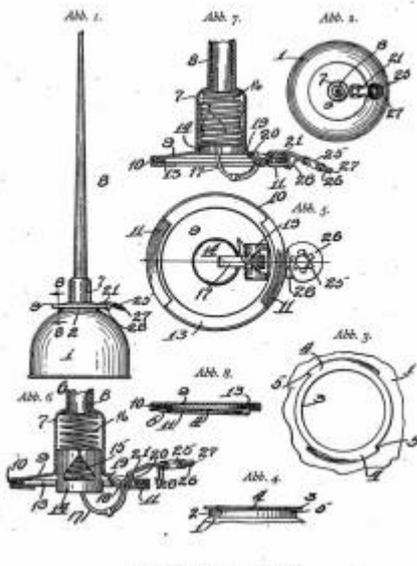

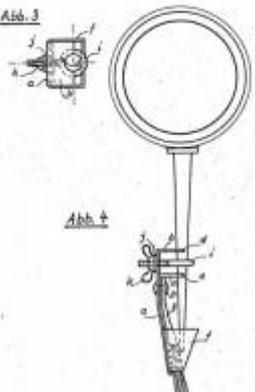

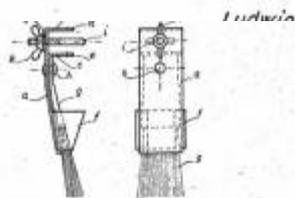

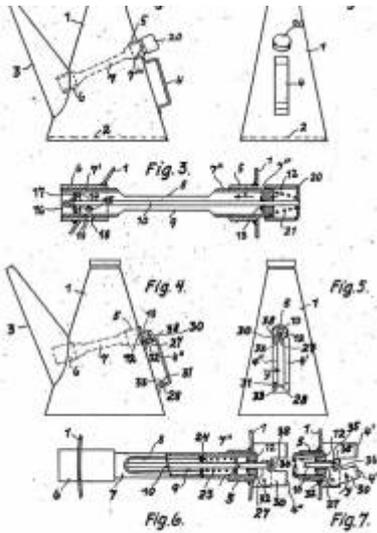

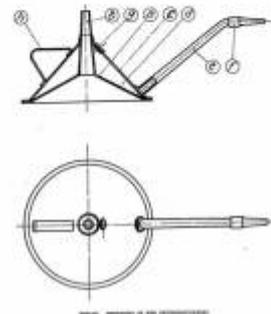

FIGURE BRICK DER SCHNITTANSICHT

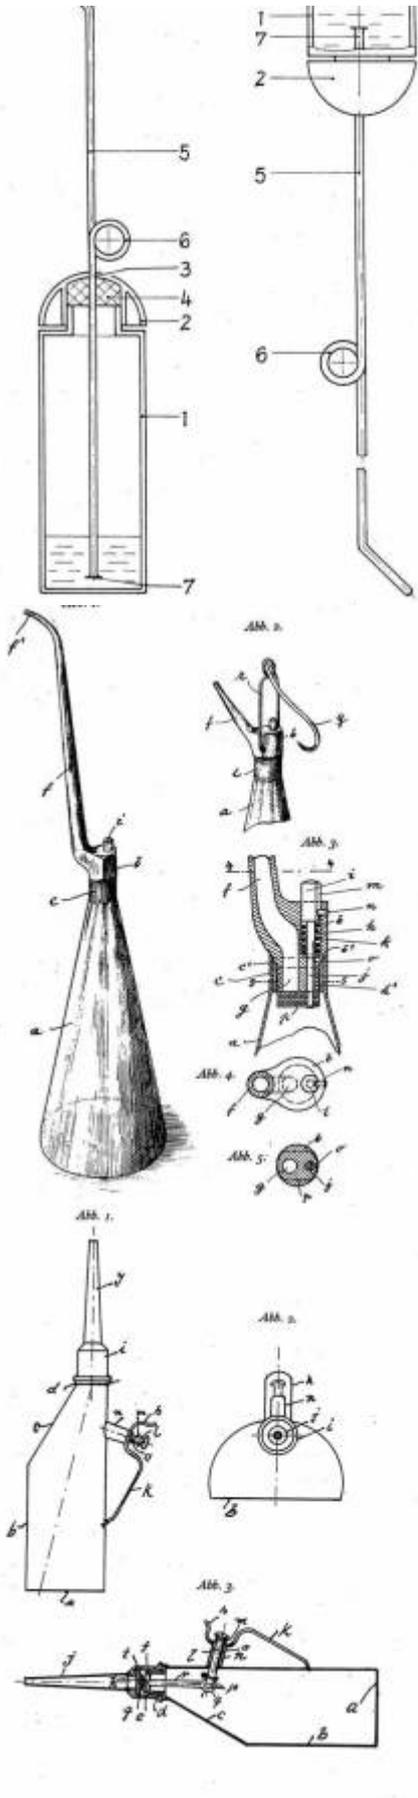

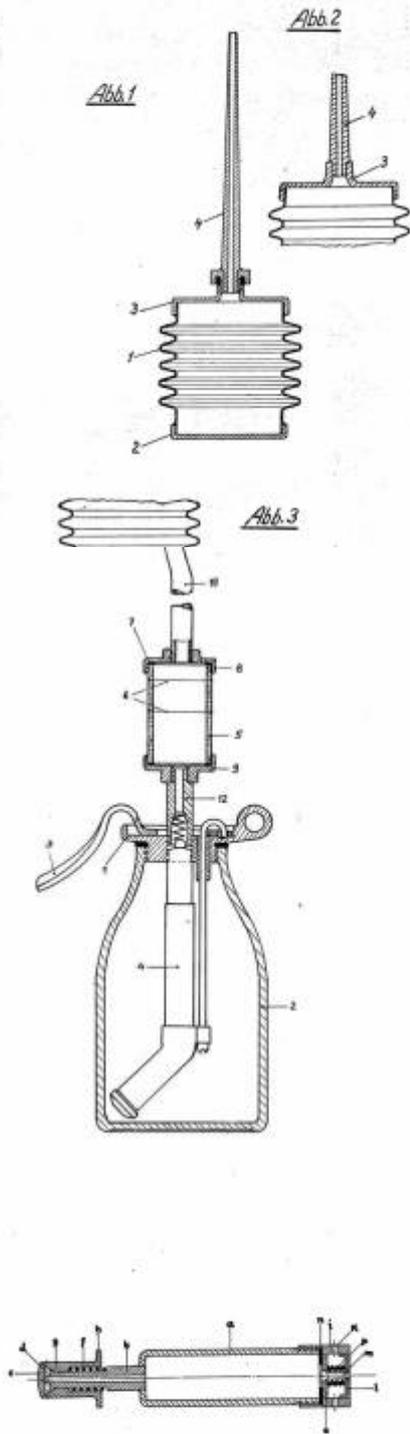

Patentiert im Deutschen Reich am 20. November 1910 ab.

Zweck in der Anordnung, Flügelpumpen, die auch in der gewöhnlichen Petroleumindustrie häufig zur Erleichterung der Verteilung oder anderer mechanischer Operationen, die Platz raubend, angewendet.  
 Die neue Ölwanne erfüllt diesen Zweck und ist als Ausführungsbeispiel in der Zeichnung dargestellt.  
 Die Ölwanne besteht aus dem Mantel *m*, dem Aufsatzrohr *a*, dem Griff *h*, während der Boden *b* vollständig wie die aufhängende Ölwanne flügelartig geformt ist. An dem Boden schließt sich die durch die Ölwanne hindurchgehende Triebwelle an. Als Ölwanne der Ölwanne ganz der Form *n* weichen dem Triebwerk *h* mit dem Mantel *m* die Ölwanne. Der Mantel *m* trägt die geeigneten Mundteile *g* der Ölwanne mit dem selbstverdrängenden Mundstück *g*, *g* ist eine Verdrängerschleuse in dem Mantel *m*, die mit den Mundteilen des Oils beschützt ist.  
 Die Gebrauch und die Anwendung der Triebwelle Ölwanne sind sehr einfach. Beim Gebrauch als Ölwanne ist nur nötig, die Mundstück *g* für den Zweck des Oils zu öffnen. Für den Gebrauch des Triebwerks wird die Mundstück *g* geschlossen und die Ölwanne so gewendet, daß die Triebwelle nach unten zeigt.  
 FÜR DEN ANWENDENDEN:  
 Ölwanne, dadurch gekennzeichnet, daß sie den Mantel der Ölwanne als Flügelpumpen (in *m*) so eingeworfen ist, daß die Ölwanne die Form zweier Flügelpumpen und Kanäle *n* annimmt (*n*) hat.
